On-site spray applicators

Colour+fastTM Cladding Coating

A specialist coating for the on-site re-colouring and refinishing of exterior cladding panels.

cladding professional application specialist coatings

General Information

Introduction

Sprayzone are the recognized market leaders in on-site spray application.

Working exclusively within the commercial sector, sprayzone have developed a unique portfolio of specialist colour+fast coatings that provide an in-situ, cost effective and superior spray finish to key architectural surfaces.

Specialising in completing spraying projects within trading retail stores, industrial units, and occupied offices, sprayzone work in partnership with many leading retailers, construction companies and property professionals to complete contracts throughout the UK.

Applications

Principal applications are in the retail, industrial and commercial sectors. Typical projects are completed as part of a refurbishment programme, maintenance programme or dilapidation schedule of retail stores, offices and industrial units.

Surface Information

Pre-finished steel cladding panels have been extensively used in the construction of industrial and retail units over the last 30 years. Although the panels have a long life expectancy, the factory applied coating (plastisol, PVF2) will gradually degrade over time and a programme of regular maintenance is recommended. Spraying of the panels may be completed at any stage of the buildings life cycle and may be for a number of reasons, including maintenance or colour change.

Specifying the correct paint system is critical to ensure surface compatibility and maximum life expectancy of the finished coating.

Coatings Information

Sprayzone have developed an effective coating system for the professional refurbishment of exterior cladding panels. Developed in association with leading paint manufacturers, the colour+fast branded coating is specifically formulated for an on-site spray finish.

Colour+fastTM (CC-01) Cladding Coating

Developed specifically for spray application on to existing steel, plastisol and PVF2 coated exterior cladding panels. This high quality coating provides resistance to atmospheric pollution, fungal attack, impact and abrasion and exhibits similar performance characteristics to the original cladding panels.

“ The building has been transformed.... Sprayzone's professional and cost effective cladding refurbishment has been instrumental in updating and refreshing the property. Our client UBS is delighted with the result, which has contributed to a significantly improved property valuation ”

Preparation

Surface preparation is dependent on the condition of the existing coating and can be determined following completion of a site survey. If the existing coating is in good condition high pressure power washing will be the minimum requirement. For coatings that have degraded further, partial or complete removal of the existing coating may be required.

Masking

Extensive masking is completed prior to commencement of the spraying process to ensure that adjacent surfaces are protected.

Application

Applied exclusively by sprayzone's own teams of fully trained applicators, specialist spray equipment is used to ensure a controlled and even surface finish. The system consists of primer, undercoat and finish coat.

Programme

Works are programmed to ensure minimal disruption to the normal working routine. Approximately 100m² of cladding can be successfully spray coated in a single shift on-site.

Access

High level projects are completed using access stilts, scaffold towers, self-propelled booms and scissor lifts. Operatives are fully trained and certified.

Colours

Available in a wide range of BS and RAL colour references. The finished coating exhibits a mid-sheen finish which is easy to clean and maintain.

Supply Information

Availability

All coatings are manufactured and supplied for exclusive application by sprayzone. Directly employed teams of skilled and experienced applicators provide a nationwide service.

Customer Service

Sales and Technical

Free site survey reports, quotations and technical advice are available from sprayzone.

Project Management

Each project is directly controlled by sprayzones experienced and qualified contracts department.
